ABSTRACT

"ProtectPets" is a website that will take rescue posts from users and all users can see those posts. This is a website for animal welfare (**Rollin, 1993**). In the pandemic of covid-19, people do not focus on homeless animals. Due to the scare of covid-19, without emergency people don't come outside. So people can help those homeless animals by giving a post. This website is also helpful after the pandemic of covid-19. Helping those homeless animals is an important ethical issue (**Fraser, 1997**).

1) INTRODUCTION

Animals have an important role in the ecosystem (**Naiman, 1988**). Nowadays there are not sufficient homes for all the animals that are born every year. In our regular life, we see a lot of homeless animal lives here and there. They don't have enough living space, food, and treatment. We have to save them for our ecosystem. That's why we think about creating a website to help those homeless animals (**Whay, May 2007**). Interested peoples can rescue those homeless animals through our website and application. In our website and application, we are trying to give many features that are helpful for animals. Features are rescue (news & request), Pet Vet (address & contact, medicine, register and login, information (how to take care pets, vaccine information), about pet food, about pet vaccine, study information, volunteer and thanks page.

2) BACKGROUND

- We are in the age of the internet now. Like everything else, people now look into the internet to adopt or to seek help for rescuing animals.
- From the beginning of the '10s different organizations and animal rights activists started taking initiatives in our country to help to rescue stray animals or giving them a new home.
- Though most of them only operate via Facebook. Only a few of them have their websites or their app.
- Besides rescuing and adopting animals, few shops also sell pet foods and medicine online. But there is no common platform yet for people to take part in the generous job of helping stray animals.

3) SPECIFICATION

The project we have made is mainly focused on rescue or save homeless animals. At first, we created a user panel. Then we created a volunteer panel for helping users. Homeless animals are not the user of our website, so users & volunteers play an important role to save them. Users and volunteers can communicate with each other through our website. That's how we can create a big community to save our ecosystem.

4) REQUIRED TOOLS

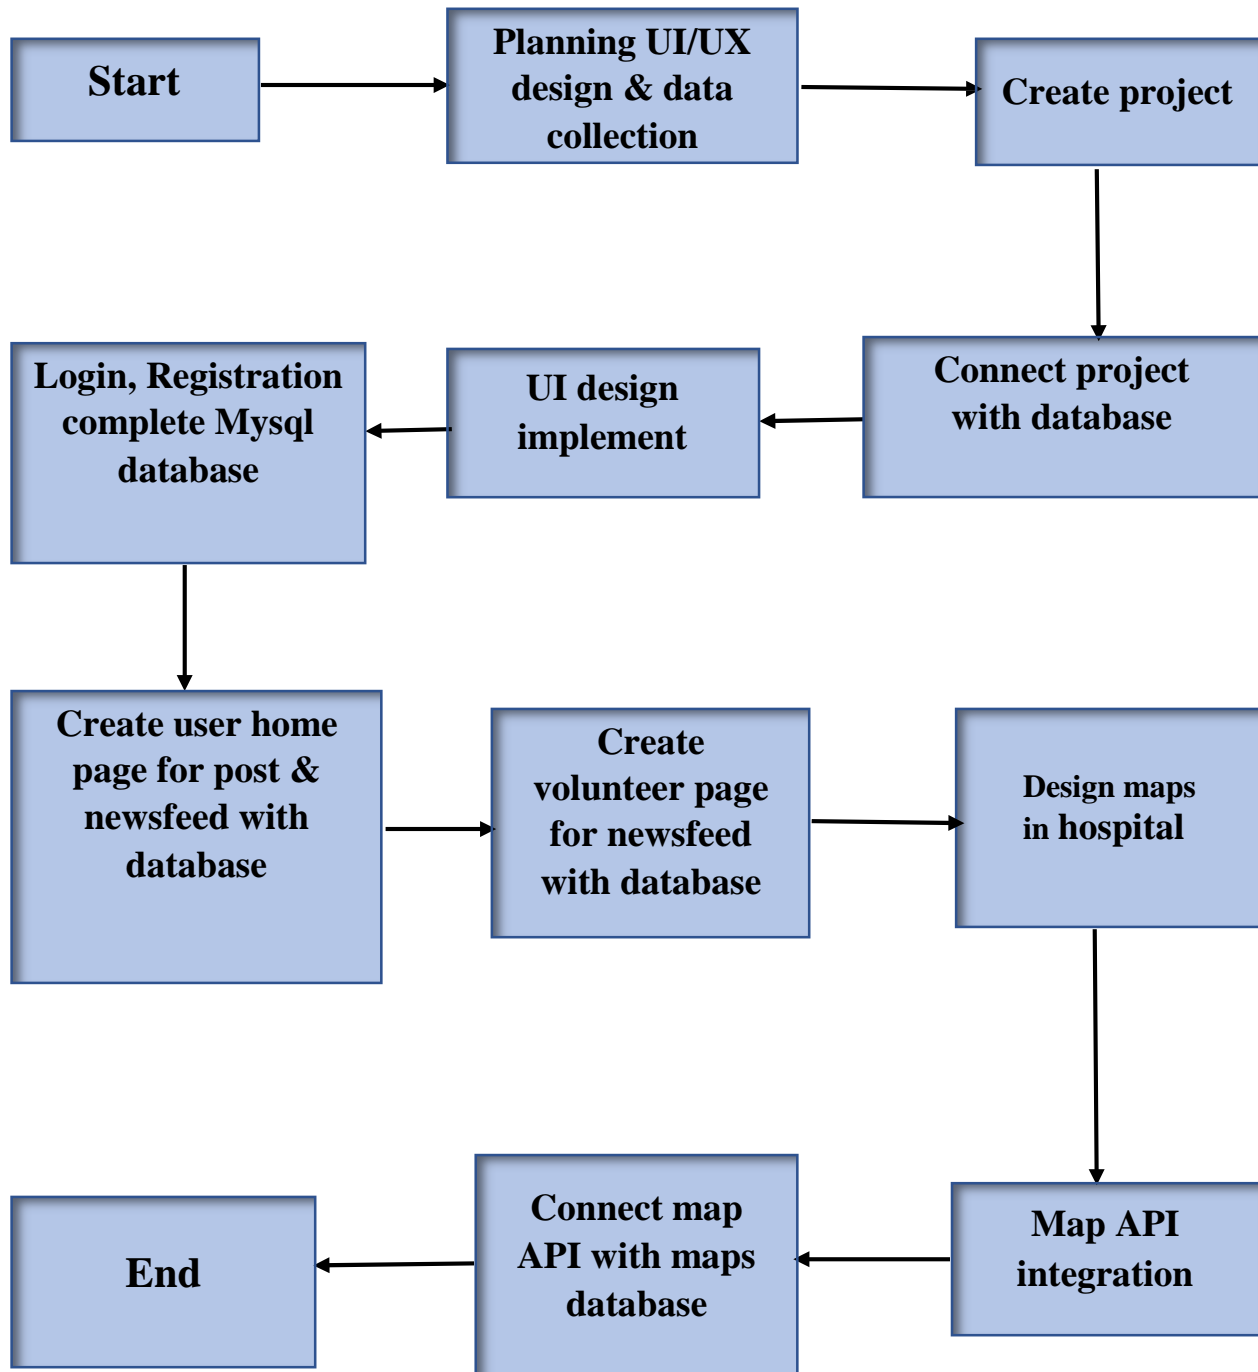

Frontend Design:

Backend Design:

5) PROJECTED PLAN

6) DESIGN & IMPLEMENTATION

In our project, has two actors (**user & volunteer**). At first, we design the UI of our project. Giving a rescue post and seeing newsfeeds, users or volunteers must be registered on our website. Registration UI is given below,

Registration:

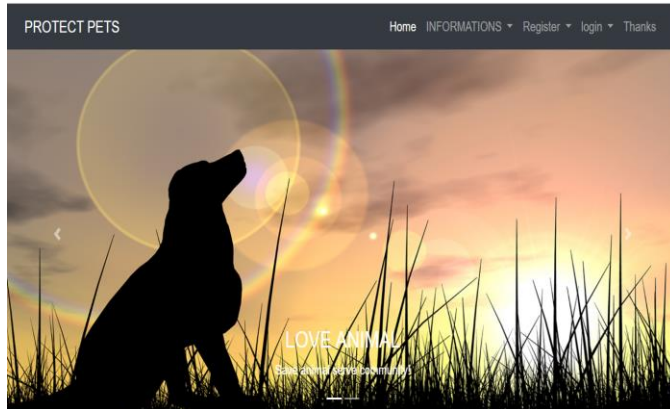

The image shows two side-by-side registration forms for a website called 'ProtectPets'. Both forms have a header with the site name and a tagline 'Participate with our community'. The left form is titled 'User Register' and includes input fields for Username, E-mail, Phone, Division, Post Code, Password, and Re-type Password, followed by a green 'Register Now' button and a link to 'Login'. The right form is titled 'Volunteer Register' and includes input fields for username, email, Phone, Division, Password, and another Password field, followed by a blue 'Login' button and a link to 'Sign Up'.

After completing registration, the user can give or see posts. Login UI is given below,

Login:

The image shows two side-by-side login forms for a website called 'ProtectPets'. Both forms have a header with the site name and a tagline 'Participate with our community'. The left form is titled 'User login' and includes input fields for Email and Password, followed by a blue 'Login' button and links to 'Forgot password?' and 'Not have an account? Sign Up'. The right form is titled 'Volunteer login' and includes input fields for Email and Password, followed by a blue 'Login' button and a link to 'Sign Up'. Below the login forms, there are sections for 'About us' and 'Quick Links'.

Website home page:

Why this website

Save homeless animals

Share a rescue post through our website and save a life for our ecosystem. Your kindness can save a life. If you want to rescue any animal, you can check news and rescue those animal through this website.

Why animals are important

The animal is everywhere in a humans life if talk about food or to keeping them as a pet. Some animals are a source of earning for few people, some are living with them as their family member. I will be sharing my own experience with you guys to let you know what I feel about the importance of animals to man. I have my experience with our pet German shepherd, his name was Stevie. when my wife was pregnant we had that sweet dog. He would come to her and keep his head on her belly most of the time. Then my daughter was born after a few months. What I noticed is Stevie was exited same as I was when he saw my daughter the first time. He liked playing with her a lot and enjoying and making my daughter laugh. he lived for about four and a half year after my daughter born. what I felt is he would understand that my daughter was a child and never to harm her. He would recognize her and enjoy playing with her.

YOU WILL ALWAYS BE THERE IN OUR HEART STEVIE.

About us

We provided a website for animal welfare. Our goal is safe animals, safe ecosystem. This is a nonprofit project.

Database Creation:

For implementing database in this project we use phpMyAdmin web server. First, we create two new databases (protectpets-master & maps) with the required tables. Snapshots of databases with required tables given below,

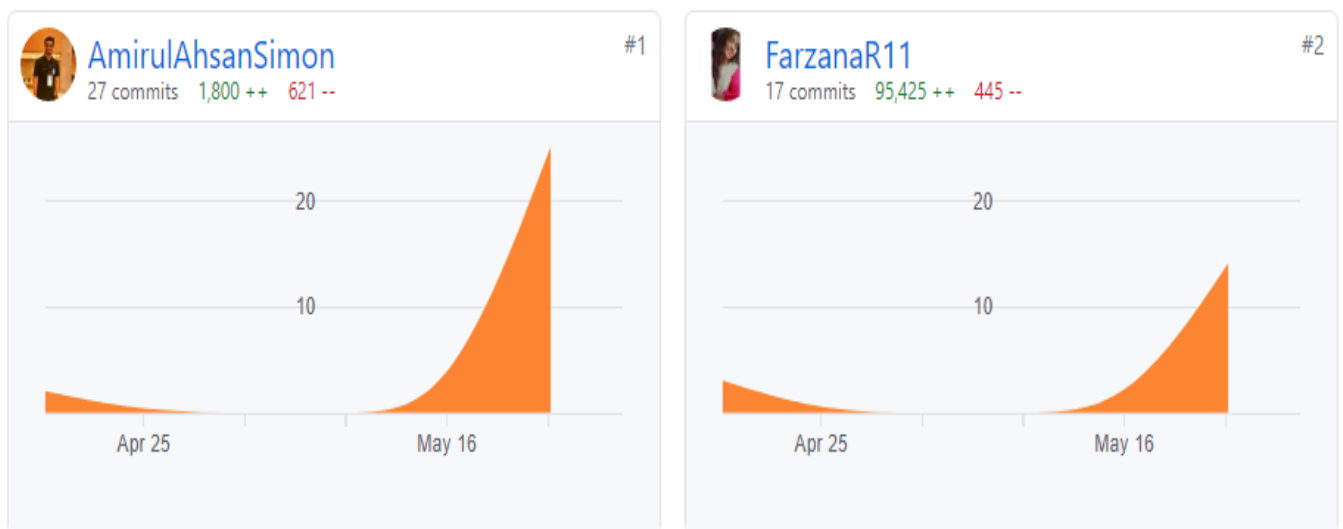

The image shows two side-by-side screenshots of the phpMyAdmin web interface. The left screenshot displays the 'Structure' view for the 'protectpets-master' database, showing a list of tables: posts, users, volunteer, and a summary row. The right screenshot displays the 'Structure' view for the 'maps' database, showing a list of tables: id, name, address, lat, lng, and type, with their respective column details and actions.

Google Map API:

Here we use Google Maps API for finding the location of the veterinary hospitals.

Posts Table Data:

When the user gives a post, the post will update in the protectpets-master database posts table. Users can update and delete posts.

The screenshot displays the phpMyAdmin interface for the 'protectpets-master' database, specifically the 'posts' table. The left sidebar shows the database structure, with 'posts' selected under 'protectpets-master'. The main panel shows the 'Table structure' view for the 'posts' table. The table has five columns: 'post_id' (int(11), AUTO_INCREMENT, PRIMARY), 'user_id' (int(11)), 'post_content' (varchar(255), utf8mb4_general_ci), 'upload_image' (varchar(255), utf8mb4_general_ci), and 'post_date' (timestamp, current_timestamp()). Below the table structure, there is an 'Indexes' section showing a PRIMARY index on 'post_id'. The 'Console' tab is visible at the bottom.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action

8) FUTURE WORK

Since this project is only focused on release or rescue homeless animals for our ecosystem. After creating a big community, then we want to give users contact with doctors from our website. Users can upload the medical reports on our website & it will give vaccine notification to the user. Our future goal is trying to create a doctor panel and collaborates with users.

9) Challenges

- Since it is a non-profit project which keenly focused on saving animal lives, the cost of server and maintenance will be challenging.
- It will require a large number of volunteers.
- Less awareness and knowledge of people about animal welfare.
- Unfamiliar approach for saving animals.
- It is a different approach to saving animals, hence people should be informed on a large scale about such a website and how it can help in saving animals.

10) CONCLUSION

We are trying to create a user-friendly website for saving homeless animals. We need to save animals for the environment. Animals need better living space, food, treatment. Through our website, we are trying to serve those homeless animals. This project may create a good connection between homeless animals and peoples. If someone is not interested in rescue animals they also can give a rescue post and save a life. This is our goal and we are trying our best.
